

The new Suzuki OMNICHORD is the latest in a generation of electronic musical instruments that let you play music without having to learn it. By using the most up-to-date microtechnology, this sophisticated electronic marvel makes it possible for anyone, musician or non-musician, to play music the very first time.

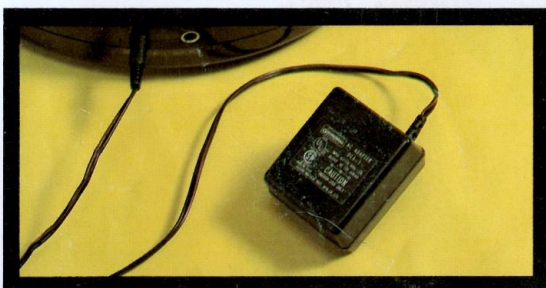

OMNICHORD is completely portable and is designed to be played in many different and exciting ways. It can be strummed like a guitar even though it has no strings to tune or break. Touch sensitive 'SonicStrings' are activated by the touch of your fingers. Play OMNICHORD like a piano or organ by pressing any of its 27 major, minor or seventh chords and produce beautiful vibrant tones through its built-in speaker. Next, combine either of these features with the walking bass. It automatically

plays the correct bass notes in rhythm with your selected chord. Then bring in the drums—key in a full electronic rhythm section with many different rhythmic patterns to choose from. All these features can be played individually or in exciting combinations.

Anyone can successfully play OMNICHORD the very first time because the microtechnology ensures perfect pitch and mistakes a thing of the past.

Weighing only 4 pounds and completely portable, OMNICHORD is manufactured from high impact unbreakable plastic and includes individual volume and tempo controls, chord sustain selector, manufacturers 12 months guarantee, full instructions and can be plugged into home hi-fi or P.A. system for concert hall sound. A/C adaptor and OMNICHORD case are optional.
